

Ankit

Generative AI Engineer

ar86748483@gmail.com · github.com/Ankit-Sinha70 · ai-3d-portfolio-ankit-sinhas-projects.vercel.app

SUMMARY

Generative AI engineer who ships systems, not just demos. Work spans text, image, and audio models — from fine-tuning and inference infrastructure to the product surface people actually touch. Comfortable with the unglamorous part before a model reaches a user: data pipelines, evaluation harnesses, latency budgets, and failure modes.

SKILLS

ML / GenAI	Python, PyTorch, Diffusion Models, LoRA Fine-Tuning, RAG, Vector DBs, LangChain, Agent Orchestration
Product / Infra	TypeScript, FastAPI, WebSockets, Astro, GSAP, Docker, PostgreSQL, CI/CD

PROJECTS

Aurora — Text-to-Image Pipeline

End-to-end diffusion pipeline with custom LoRA fine-tuning, queued inference, and a review UI for output curation.

Diffusion · LoRA · FastAPI

Echo — Voice Cloning Service

Low-latency voice synthesis service with speaker embedding cache and streaming playback.

TTS · PyTorch · WebSockets

Ledger — RAG Knowledge Assistant

Retrieval-augmented assistant over internal docs with hybrid search and citation-grounded answers.

RAG · Vector DB · LangChain

Drift — Agentic Workflow Runner

Multi-step agent orchestration with tool calling, retries, and human-in-the-loop checkpoints.

Agents · Orchestration · TypeScript

Halo — Generative Video Prototyping

Frame-consistent short-form video generation pipeline with prompt-driven storyboard control.

Video Gen · Python · FFmpeg
